

MOLDED-CASE CIRCUIT BREAKERS & EARTH-LEAKAGE CIRCUIT BREAKERS 30~800A FRAME

Announcing the completion of
a full line-up of
PSS circuit breakers
for the 21st century.

PROGRESSIVE
SUPER SERIES

High Performance

Mitsubishi Electric Corporation's Fukuyama Works,
which produces these products, is certified as meeting
the ISO14001 environmental management system standard.
Certification No.: EC701128 Date of Certification: Nov. 26, 1997

INTRODUCTION

Circuit Breakers for the 21st Century

The completion of a full line-up of PSS breakers

As the leading manufacturer of circuit breakers, Mitsubishi Electric has long developed products to fit the needs of the era. With the completion of the Progressive Super Series (PSS) circuit breakers covering 400~800 Ampere frame(AF), we can now offer a full complement of PSS models from 30~800AF. With our advanced technology and know-how, we're already anticipating the needs of the next era by producing new circuit breakers for the 21st century: PSS circuit breakers.

RAPID PROGRESS

21st century functions

Mitsubishi Electric is pioneering new technology that will take us into the 21st century. One such technology is the new digital display unit for circuit condition. In keeping with the era's needs, it permits energy management. As such, it can be justly described as a circuit breaker with a brain, a new type of intelligent breaker for the next century.

DEVELOPMENT

Ease of use

The new circuit breakers are easier to use than ever before. The module types have been simplified to just two sizes, allowing easier board design standardization and rationalization. The cassette accessories also make replacement a simple, one-touch operation.

EVOLUTION

Technology

To reflect a variety of uses and applications, the line-up has been further expanded. This new comprehensive line-up answers the demands of the era for models with high specifications for a range of purposes and applications.

SUPERIORITY

Breaker with a brain

The new digital Electronic Trip Relay (ETR), the brain of the circuit breaker, ensures accurate protection of the circuit. Using advanced digital technology, Mitsubishi has succeeded in creating a new type of electronic circuit breaker, and realized a new level of safety and reliability.

HIGH PERFORMANCE

Full Scale Progressive Super Series

**Packed with Mitsubishi's 21st century technology.
Circuit breakers with advanced intelligence are now available.**

Technology continues to evolve toward the 21st century. The consumption of electric power increases as well, demanding from circuit breakers new levels of functionality, flexibility, power- and space-saving. To answer the requirements of the era, we have realized a new level of harmony between breaker and measuring component. We have created a new generation of breakers, which are without equal to any previously produced models. Mitsubishi Electric is proud to announce the newest evolution in circuit breakers for the 21st century, combining new levels of superiority and reliability.

Progressive Super Series

Caution: Before installing these circuit breakers, it is recommended that their safe and correct usage be studied with a thorough reading of the "Handling and Maintenance" guidebook.

RAPID PROGRESS

The circuit breaker incorporates a digital Measuring Display Unit (MDU). It can measure and display a range of circuit condition data for more efficient energy management.

Display

Measuring and displaying the load current, line voltage, electric power, electric energy level, harmonic current (third, fifth, seventh and total) earth-leakage current* enables energy control.

*Earth-leakage current is used with electronic earth-leakage circuit breakers.

Monitoring

The LED lights when it monitors the following alarm output from the circuit breaker.(except for 225AF)

- PAL: Pre-alarm
- OVER: Overload alarm
- EPAL: Earth-leakage pre-alarm: setting either electronic earth-leakage circuit breakers is possible by using the switch on the MDU. When the current exceeds the preset earth-leakage level, the LED lights.

Measuring display item	225AF	400AF	630AF	800AF
Load current Present value, average value, maximum value	●	●	●	●
Line voltage Present value, average value, maximum value	●	●	●	●
Harmonic current Third, fifth, seventh total	●	●	●	●
Electric power Present value, maximum value	●	●	●	●
Electric energy accumulated Total value	●	●	●	●
Earth-leakage current Present value, average value, maximum value	●	●	●	●
Power factor Present value	●	●	●	●

Maintenance

- Measures and displays the cause, short-circuit current of the fault and the fault load current (overload current or earth-leakage current). (except for 225AF)
- Even when the control power is cut, the fault's cause and load current are saved. (except for 225AF)
- Since the maximum value of the average load current, power and time of occurrence are measured, this is helpful for locating the peak time for energy use.

Example of NV630-SEPM long-delay tripping display

Installed on the main unit.

Installed on the panel.

Installation

- The measuring VT and CT are installed within the circuit breaker, thus offering savings on space and wiring.
- The measuring display unit can be installed on the circuit breaker or onto the panel.

Applicable models: NF225-SPM, NV225-SPM
 NF400-SEPM/HEPM, NF630-SEPM/HEPM,
 NF800-SEPM/HEPM, NV400-SEPM/HEPM,
 NV630-SEPM/HEPM, NV800-SEPM/HEPM

DEVELOPMENT

In the pursuit of ever easier operation, the modules are now unified into just five types—allowing rationalization and standardization of the panel design.

Standardized to five module types

- PSS breakers (30~800AF) are standardized to five sizes.

- MCCBs = ELCBs
- Thermal-magnetic type = Electric-trip relay type

Panel cut-out design unified to include 30~800A frame

- Two types of panel cut-out are available.
- All are symmetric with the center line.

Cassette-type accessories

● Cassette-type accessories ensure flexibility when upgrading circuits. Ordering is easy, and installation is one-touch simple—and safe too thanks to the insulated cassette design.

Fits all breaker series

The alarm switch (AL), auxiliary switch (AX), shunt trip (SHT), and undervoltage trip (UVT) all come as cassette-type accessories to suit all breaker series (types). Choose from two options: lead or lead-wire terminal block.

Installation

- Caution.**
- Always ensure the breaker is tripped when installing accessories.
 - Please entrust installation to an experienced person.
 - Please refer to the instruction manual in the box.

EVOLUTION

PSS now has improved performance and safety because of IEC60947-2 compliance.

●In order to conform to IEC60947-2, molded-case circuit breakers are now standard.

●Earth-leakage circuit breakers also conform to IEC60947-2

$I_{cs} = 100\%I_{cu}$

●The SP, SEP, and HEP types in the 400~800AF offer $I_{cs} = 100\%I_{cu}$.

The IEC60947-2 specifies the I_{cu} (rated ultimate short-circuit) and I_{cs} (rated service short-circuit) breaking capacities to the following two types:

I_{cu} : O-CO

I_{cs} : O-CO-CO

The rise in temperature after breaking test is also regulated.

Utilization category "B"

All electronic-type models (400~800AF) satisfy Utilization category "B". Utilization category is a regulation on application with respect to selectivity.

Utilization category A: Circuit breakers not specifically intended for selectivity under short-circuit conditions. Such breakers do not have a short-time withstand current rating.

Utilization category B: Circuit breakers specifically intended for selectivity under short-circuit conditions. Such breakers have a short-time withstand current rating.

Standardized as "Suitable for Isolation" and despatching

The load dispatching point for supply disconnecting devices is regulated according to the EC's machine directives, European Standards EN60204-1 "Electrical Components of Mechanical Equipment Part1—General Matters."

For circuit breakers, the breaker's function is suitable for isolation.

Note 1: 400~800AF are suitable for isolation (excluding 4-pole models).

Note 2: For breakers under 250AF, please contact us for details.

Class II insulation (IEC 664)

The handle is double insulated to make it safer than ever. (Even if the handle is damaged, the insulation is secure.)

SUPERIORITY

A microcomputer and Mitsubishi's original IC realize a new high level of safety

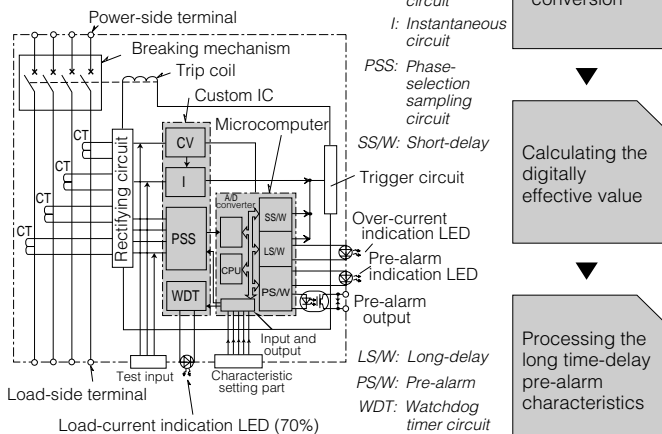

Safer and more reliable power

Digital current evaluation delivers a higher level of protection

Electronic device loads, such as inverters, distort the current waveform. Our electronic breakers use a digital detector to measure the current's effective value and minimize overload tripping errors. This enables precise protection of the circuit.

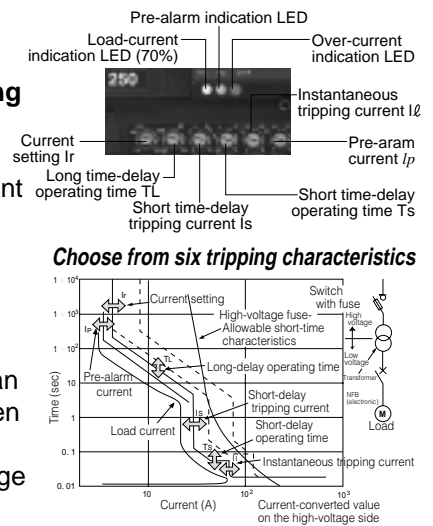

Digital current evaluation circuitry.

Improved protection against fluctuations in the load current

Coordinated protection from multiple (6) tripping characteristics

The user has a choice of six different items as tripping characteristics with the multiple coordinated protection method. Better protection can be obtained between high-voltage fuse, OCR and low-voltage fuse.

Improved protection and safety

Neutral-pole overload protection for 4-pole electronic circuit breakers

Four-pole MCCBs are equipped with a neutral-pole overload protection circuit. It prevents burn-out in a 3 ϕ 4w circuit which is prone to distorted third-harmonic current flows.

Alarm function monitors and anticipates interruptions

Standard pre-alarm system lights LED and outputs signal

PSS electronic MCCBs feature a pre-alarm function as standard. The preferential alarm predicts an overload condition in the breaker before it trips. When the load current exceeds the set pre-alarm current, it outputs a pre-alarm signal (from the solid-state relay) and lights the LED.

The pre-alarm module (with contact output) is optional with electronic molded-case and earth-leakage circuit breakers.

Portable tester facilitates checking and maintenance

The separately sold portable tester allows the user to check the four characteristics shown below on location:

1. Long-delay tripping
2. Short-delay tripping
3. Instantaneous tripping
4. Pre-alarm characteristics

LEDs for load current, pre-alarm and over-current show the operating status.

* 2 . In case of DC use, only DC65V is available.

* 3 . Specify when ordering. (In case of CP-S UL, type name is CP-SU.)

SPECIAL PURPOSE BREAKERS

MAG ONLY, DC-USE AND DSN-TYPE

Mag Only (Instantaneous tripping circuit breakers)

Fixed	NF50-CP/HP	AC, DC	Rated current x10	
	NF60-CP/HP	AC, DC		
	NF100-CP/SP/HP	AC, DC		
	NF160-SP/HP	AC, DC		
	NF250-CP/SP/HP	AC, DC		
	NF400-CP/SP NF630-CP	AC, DC		
Adjustable	NF630-SP	AC, DC	High: Rated current x10 Low: Rated current x4	
	NF800-SEP	AC	High: Rated current x10 Low: Rated current x2	
	NF800-SDP	DC	High: 8000A Low: 3200A	

Note: Standard are fixed type models. Adjustable type can be made to order.
Remarks: 1. The size, weight, accessories, etc., are all identical to the same-designation C and S series breakers.
2. For more detail, contact your dealer.

DC-Use MCCBs and DSN-type Switches

Breaking is more difficult with direct currents because the current value never reaches zero. While ordinary DC breakers are suitable for low voltages, special voltage DC breakers are recommended for voltages in excess of 250VDC. Breakers for 550V are all 4-pole models.

The size, shape, drilling plan, accessories, etc., are all identical to the S series of same-designation breakers.

Wiring diagram for DC-usage.

Note: The tripping characteristics will change if the wiring differs from the one shown here.

Type	NF50-HP		NF60-HP		NF100-SP		NF160-SP		NF250-SP		NF400-SP		NF630-SP		NF800-SDP	
Number of poles	3	4	3	4	3	4	3	4	3	4	3	4	3	4	3	4
Rated voltage (VDC)	400	550	400	550	440	550	440	550	440	550	440	550	440	550	440	550
Rated breaking capacity (kA) IEC 60947-2 (ICU/ICS)	2/1		2/1		10/5		15/8		15/8		40/40		40/40		40/40	

Notes: 1: Time constant: 10ms or below.

● DC side

These breakers are designed as thyristor-Leonard system DC-side breakers. They protect the thyristor from short circuiting when there is a power or

communication failure. (Mag-Only breakers can also be used for this role.) Use these breakers in combination with fast fuses for even greater protection.

Type	NF100-SP		NF160-SP		NF250-SP		NF400-SP		NF630-SP		NF800-SDP	
Number of poles	2	3	2	3	2	3	2	3	2	3	2	3

SPECIAL PURPOSE BREAKERS

400HZ-USE, INSTANTANEOUS AND GENERATOR PROTECTION

400Hz-Use MCCBs

The tripping characteristics for these MCCBs increase with an increase in the interrupted current instantaneous trip operating current. For this reason, these breakers are recommended for use in high-frequency circuits.

● Specifications

The appearance, size, rated interrupting capacity, drilling plan, accessories, etc., are all identical to the standard S series of same-designation breakers.

Type	NF100-SP	NF100-HP	NF250-SP	NF250-SEP	NF250-HP	NF400-SP	NF400-SEP	NF630-SP ^{*1}	NF630-SEP	NF800-SEP

Line and load must be connected as shown in figure (a).

For MCCBs, line and load may also be connected in reverse as shown in figure (b).

ACCESSORIES

INTERNAL

Cassette-Type Internal Accessories

Internal accessories	Function	Applicable models	Connection type	
			Lead-wire terminal block	Flying leads
AL (Alarm switch)	Indicates that the breaker has tripped.	NF-C/S/U, NV-C/S and MB series	●	●
AX (Auxiliary switch)	Indicates whether the breaker is ON or OFF.		●	●
SHT (Shunt trip)	Trips the breaker electrically by remote. Allowable tripping voltage is 70% to 110% of the rated voltage for both AC and DC. NF-C/S/U, NV-C/S and MB series	NF-C/S/U, NV-C/S and MB series	(NF30-250)	(NF30-250)
			(NF/NV400-800)	(NF/NV400-800)
UVT (Undervoltage trip)	Trips the breaker automatically when the voltage drops. The tripping voltage is 35% to 70% of the UVT rated voltage. When the voltage recovers to 85% of the rated voltage or above, the UVT can be reset and the breaker closed.		(NF30-250)	—
			(NF/NV400-800)	—

Remark: Cassette-type accessories are field-mountable type. They are available for individual purchase.

Built-In Internal Accessories

Internal accessories	Function	Applicable models	Connection type	
			Lead-wire terminal block	Flying leads
EAL (Earth-leakage alarm switch)	Indicates that the breaker has been tripped by earth leakage. (Only available with lead-wire terminal block.)	NV-C/S/U and MN series	●	(NV30-225) — (NV400-800)
TBM (Test button module)	Applies a test voltage by remote.		●	—
MG (Insulation switch)	When installed on an earth-leakage circuit breaker, it allows the load side insulation resistance to be measured while the breaker is off.		●	—
PAL (Pre-alarm module)	Indicates that the load current exceeds the pre-alarm setting current.	Electronic Types	●	—
OAL (Overcurrent trip alarm switch)	Indicates that the breaker has been tripped by overcurrent or short-circuit current.		—	NF/NV400-800-SEP ●

*2. When mounting more than three left-pole mounting devices by SLT, or when mounting a SHT or UVT to the same pole as the AL, AX or AL + AX, a special-order SLT is necessary.

*3. When mounting a UVT to the same pole as the AL, AX or AL + AX, the UVT voltage module is separate.

● ELCBs

Type	NV-C/S	NV400-CP/SP NV400-SEP/HEP/REP	NV630-CP/SP NV630-SEP/HEP NV800-SEP/HEP
Poles		3, 4	
Switch type		S	
Accessories	AX + MG		
	AL + AX + MG		
	EAL		
	TBL		
	TBM		
	PAL (contact output)		
	TI		

The number within the circle shows the order of mounting.

1. EAL, TBL, and TBM can be mounted regardless of the number of AL, AX, SHT, UVT and MG accessories. (However, two EALs, TBLs or TBMs cannot be mounted simultaneously.)

2. The PAL's dimensions and specifications change for the NF-C/S and NV-C/S series.

*1. SLT-equipped is standard. Control voltage (AC100-200V) is necessary. (In this case, no other accessories can be mounted to the breaker's right pole.)

*2. SLT-equipped is standard. Control voltage (AC100-200V/DC100-200V) is necessary. (In this case, no other accessories can be mounted to the breaker's right pole.)

*1. Rated voltage differs according to make and country of manufacture. Please consult your dealer.

*2. The operating time is the time from the start of operating the breaker since the undervoltage trip went from voltage to no-voltage condition.

*3. 50Hz and 60Hz for common use.

*4. When the breaker is turned on without exciting to UVT (no-voltage condition), the contact of breaker tips (close momentary).

*5. Mounts to the left pole.

Vertical Lead-wire Terminal block (SLT)

- Makes possible contact installation between terminal block and breaker.
- No need for correspondent terminal.
- Staggered arrangement of terminal screws makes wiring easier.
- It's also easier to perform a check for tightness of the terminal screws.
- Terminal cover for the terminal block is standard (included).
- Terminal covers come in front, rear, and plug-in connection types.

ACCESSORIES

INTERNAL

Pre-Alarm Module (PAL-M)

This module functions to give alarm output when load current exceeds a preset current level and serves for securing continuous power supply and also for preventive maintenance. The electronic breakers with mount digital ETR of 100 to 800AF

are provided with this module as an option. (Some modules are with this module as standard equipment.) 1000 to 2000AF are prepared for exclusive use.

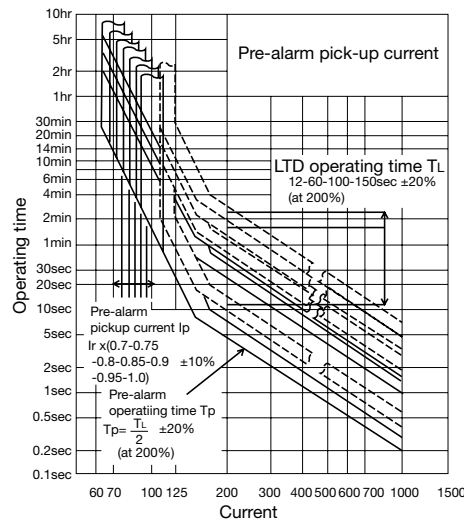

Type	Pre-alarm LED (Auto reset)	Solid state relay (SSR) output-Contacties output (Auto reset)		Pre-alarm module-Contact output (1a)		
		Standard equipment	Switching capacity	(Self-holding)	Switching capacity	Reset system
NF100-SEP NF100-HEP	Standard equipment	Standard equipment	24VDC 100-200VAC 20mA	Option	100VAC or 200VAC 2A	Press the reset switch or turn off control power.

NF800-SEP NF800-HEP NF800-REP						
NF800-UEP						
NV400-SEP NV400-HEP NV400-REP						
NV630-SEP NV630-HEP NV800-SEP						
NV800-HEP						

- ① Pre-alarm LED
The LED starts blinking on the circuit breaker when load current exceeds the preset current, then changes to continuous glowing when pre-alarm output is given.
- ② Solid-state relay output
Open the upper cover of the circuit breaker, connect the connector of the lead wire packed together and use it as the lead wire outlet. In this case, only the lead wire outlet of the internal accessories can be attached to the right pole. (For flush plate type, the outlet is manufactured in advanced as a PAL mount.)
- ③ Pre-alarm module
SLT is attached as standard and is used as the control power source of 100VAC or 200VAC. In this case, no other internal accessories can be attached to the right pole. (Auto resetting is also applicable.)

● Pre-alarm characteristics

Percentage (%) to rated current or preset current rating (NF/NV100,250AF)

Percentage (%) to rated current or preset current rating (NF/NV400,630,800AF)

Trip Indicator (TI) New

When the breaker is tripped, this accessory installed on the right side will display the cause of the trip--either long delay (LTD) , short or instantaneous (STD/INST), earth-leakage (EAL) (with earth-leakage breakers only)--on its LED and output an alarm signal. In this case, both LTD and STD/INST are treated as overcurrent trips (OAL) and output signals. Pre-alarm is also output. Again, with this module, it is impossible to connect other internal accessories to the breaker's right side.)

Type	LED contents
NF400-SEP/HEP/REP/UEP NF630-SEP/HEP/REP/UEP NF800-CEP/SEP/HEP/REP/UEP	Long-time delay, Short-time delay, Instantaneous, Pre-alarm
NV400-SEP/HEP/REP, NV630-SEP/HEP, NV800-SEP/HEP	Long-time delay, Short-time delay, Instantaneous, Earth-leakage, Pre-alarm

* Requires 100-200VAC control voltage.

3ø4W Neutral-pole protection Relay (NR)

● With 3-phase 4-wire circuits, the circuit's supply voltage depends on the neutral-pole tripping characteristics.

Phase/wire type		3 ø 4W				
Rated voltage	VAC	415				
Usable supply voltage	VAC	304-484				
Tripping characteristics	Usable voltage (line voltage)	VAC	380	400	415	440
	Total operating overvoltage (phase voltage) (135% of total phase voltage)	VAC	296	312	323	343
	Total non-operating overvoltage (phase voltage) (120% of total phase voltage)	VAC	263	277	288	305
	Total overvoltage operating time	(s)	1			
	Overvoltage non-operating time	(s)	More than 0.1

Measuring Display Unit (MDU)

- The measuring display unit (MDU) is for use with electronic MCCBs and ELCBs. It monitors a wide range of load current characteristics.
- The MDU can also be installed separately from the breaker main unit.
- The measured values and/or the alarm signal output can be transmitted via Mitsubishi's FA network CC-Link (option). The electric energy can be manufactured as pulsed output (option).

■ General precautions for motor-operated electrical MCCBs

- Motor-operated types have intermittent ratings, and therefore they should not be operated more than 10 times consecutively (one on/off counts as an operation).
- The operating voltage should be between 85~110% of the rated control voltage.
- When the breaker is tripped by trip button or breakdown (i.e., overload or short circuit), the breaker will not show that it has been tripped (except for motor-operated type 1 breakers).
- The dielectric strength of the electrical operating

circuits is 1500V. When performing a dielectric strength test simultaneously with another device at a voltage over 1500V, the operating circuit terminal should be disconnected

■ Automatic Reset

- If the breaker is an auto reset type, it contains a built-in alarm switch and the off-control circuit closes when the breaker is tripped. Since the breaker automatically resets itself after tripping, the power is easily restored by switching on the breaker again. With a UVT mounted, however, auto reset may not be possible. In this case, please consult your dealer

● Terminal connections

Connection		Front	Rear	Flush	Plug-in *1
AF	50-250	●	●	●	●
	400-800	●	●	●	●

Remarks: All 2-pole breakers are constructed by removing the central pole from the appropriate 3-pole type.
*1. For NV types, only 3-pole of 100 and 225AF available.

● Structure and Operation

■ Motor-operated type (1)

● Electrical operation

Motor rotation is changed by DC motor, gear and cam to linear motion to switch the breaker ON and OFF (reset).

● Manual operation

Set the slide switch to Manual. Insert the handle and rotate it clockwise for ON or anticlockwise for OFF (reset). After manual operation is complete, turn the slide switch back to Auto.

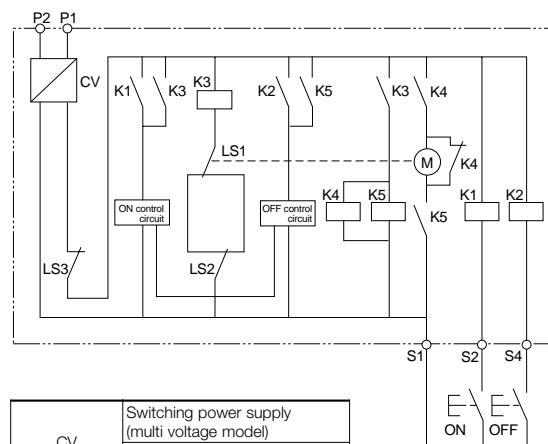

● Cautions during electrical operation

1. When performing ON and OFF (reset) switching, the current flow is very low (approx. 15mA, DC24V). Therefore the operating switch should be suitable for low current.

2. If the breaker has a UVT attached, do not give continuous OFF signals.

3. For automatic resetting system, use the alarm switch (for microload) of the circuit breaker and wire the operation switch circuitry (between terminals S1, S2 and S4) as shown in Fig. 1.

Notice that in a circuit without interlocking as shown in Fig. 2, application is made immediately after resetting if the circuit-breaker trips when the ON signal is applied continuously. Take care not to allow the continuous application of the ON signal.

CV	Switching power supply (multi voltage model) Diode stack (24V dc model)
LS1	Limit switch (for cam position detection)
LS2	Limit switch (for breaker handle position detection)
LS3	Limit switch (MANUAL/AUTO selector)
M	Motor
K1	Relay (for ON operation)
K2	Relay (for OFF operation)
K3	Relay (for motor)
K4	Relay (for motor)
K5	Relay (for motor)

Fig.1

Fig.2

4. Switching the internal power supply could interfere with nearby communications equipment such as AM radio. If this is cause for concern, it's recommended that a noise filter be installed between terminals P1 and P2 and the power supply.

ACCESSORIES

EXTERNAL

Electrically Operated MCCBs and ELCBs

■ Motor-operated type (2)

- Electrical operation
Forward and reverse motor rotation is changed by ball screw to switch the breaker ON and OFF (reset).
- Manual operation
The manual operation handle can be used to switch the breaker ON and OFF directly.
- Cautions during electrical operation
 1. In case the UVT operates and a circuit breaker trips if the breaker has a UVT, the re-closing procedure may differ according to the state of the breaker before tripping.
When the circuit breaker trips while turned ON.....
Reset (OFF) -> Turn ON
When the circuit breaker trips while turned OFF.....
Turn ON (idle tripping) -> Reset (OFF) -> Turn ON
(If it fails to turn ON (idle tripping), please operate Reset (OFF) and turn ON.)
 2. Do not send ON and OFF signals consecutively. An interval of at least 0.5s is required between each ON and OFF.
 3. For models with auto reset capability, resetting after an NFB trip should be performed after an interval of 0.5s.
 4. The electrical operating device is equipped with a pumping prevention circuit. Although it is possible to set the device to OFF while it is set to ON, it is impossible to return it to ON immediately. To return to ON, first shut off the ON switch, then set it back to ON.
 5. Special care is required during electrical operation because the manual operation handle moves at high speed. Also be sure to turn off the circuit power supply when using manual operation.
 6. With manual operation, ensure that the handle is fully extended.

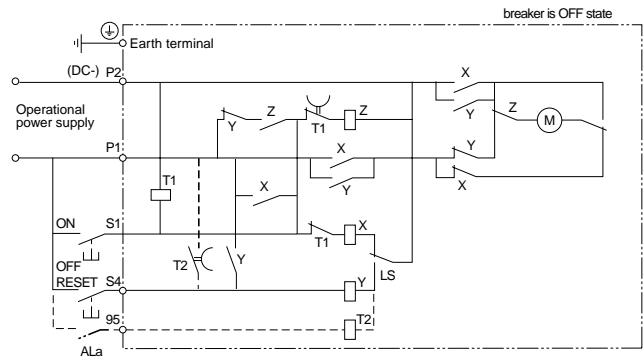

Manual operation

Internal structure

● Control circuit

The dotted line shows an additional connection for the automatic-reset type.

*1. Specify the breaker mounting pitch (P)
*2. No need to specify the panel thickness (t). (Usable panel thickness range: $t=1\sim 3.2\text{mm}$. Above 400AF, use panel thickness $t=1.6\sim 3.2\text{mm}$.)
*3. For isolation purposes with 400/630/800AF models, keep the C dimension deviation within $\pm 1\text{mm}$.
*4. Enquire for more details.
Remarks: Mechanical interlock walking type (MI-W) for electrical operating can be made to order. Consult your dealer. (Above 400AF)

Remarks:

1. Padlocks for HL and HL-S must be provided by the customer.
2. Can be mounted regardless of number of poles.
3. HL and HL-S are isolation models.
4. The HL without padlock can be used as a lock cover (LC).

F-Type Operating Handle

● Appearance (color: N1.5)

- Includes as standard a safety device which prevents breaker closing as long as the cover is open. (Specify if this safety feature is not required.)
- Indicates the tripping of the breaker even in ON-lock position—but only in cases when a single padlock (35mm) is used.
- Degrees of protection (in accordance with IEC529): IP3X (IP5X with provision of dustproof packing).

● Improved item for new models

COMPARISON

OTHER CHANGES

30~800AF

● Appearance

● Former (example: NF100-SS)

● New (example: NF100-SP)

Includes a trip button within the panel cutout. New model indicates IEC60947-2 Icu/lcs on the nameplate.

● Former (example: NV100-SF)

● New (example: NV100-SP)

Includes a dial selector switch. Sensitivity current is selectable using a JIS based 4.5x50 screwdriver. New model also includes a trip button.

● Front panel cutouts (partial list of main NF/NV models)

	NF		NV	
Former	NF50-CS~NF250-CS NF30-SS~NF250-SS NF50-HR, NF100-SH, NF250-SH	NF400-CS~NF800-CS NF400-SS~NF800-SS	NV50-CF~NV225-CF NV30-SF~NV225-SF	NV400-CF
New	NF50-CP~NF250-CP NF30-SP~NF250-SP NF50-HRP, NF100-HP, NF250-HP	NF400-CP~NF800-CP NF400-SP~NF800-SEP	NV50-CP~NV225-CP NV30-SP~NV225-SP	NV400-CP
Compatibility	Former cutout sizes can also be used on the front panel. The distance from the breaker base to the front panel differs from the former (see figure at right).		Compatibility is assured. The new 250A (225A) frame's breaker height is 18mm over than the former.	

● Dimensions (400AF 4-pole models)

● Both the overall module dimensions and bar terminal dimensions are altered greatly.

● Front panel cutouts (some as previous NF)

The cutout size is equal to breaker's window frame plus 1mm clearance.

● Connection parts (partial list of 3-pole C series models or equivalent)

Product name	Rear stud (B-ST)			Flush plate (FP)			Plug-in (PM)

● Rear studs for 100AF and NF50-HRP have changed from screw studs to bar studs (new).

● Screw stud (former 100AF)

● Bar stud (new 100AF)

COMPARISON

OTHER CHANGES

Internal accessories

● Lead-wire terminal blocks

(Front/rear connection and plug-in types only; excludes P-LT types)

Type	Former	New
Lead-wire terminal block (LT)	●	—
Lead-wire terminal block (SLT)	●	●

- All new models use a vertical lead-wire terminal block (SLT).

● Lead-wire terminal block (LT)

● Vertical lead-wire terminal block (SLT)

● Test lead (TBL) and Test button module (TBM) for ELCBs

	Former	New
TBL	●	●
TBM	—	●

The TBM has the following features:

- Standard with SLT.
- Uses a voltage-application system and offers same control sequence to that of SHT..
- Permits TBM parallel connection.
- Offers enhanced safety because it is isolated from the main circuit.

● Pre-Alarms

	Former	New (SSR output)	New (contact output)
Molded-case circuit breakers	Pre-alarm breakers (special specification)	The standard electronic MCCBs has solid-state relay (SSR) output pre-alarm as standard.	Optionally available as a model with a pre-alarm module in the standard electronic MCCBs.
Earth leakage circuit breakers	—	—	Optionally available as a model with a pre-alarm module in the standard electronic ELCBs.

External accessories

● Operating handles (F, S, SS types) (Main NF/NV models shown) (30-250AF)

Former			New			Compatibility
Breaker type	Parts number		Breaker type	Parts number

	250	TCL-2SS3	TCL-2SP3	TCS-2SP3	TCS-2SP3	TTC-2SS3	TTC-2SP3	BTC-2SS3	BTC-2SP3

- 50AF and 60AF models are compatible, even though part numbers differ. (Note, however, that using an earlier terminal cover on a new breaker will block the internal accessories' leads from exiting on the load side.)
- 100AF and 250AF models are incompatible.

● Motor operation devices

- The new NF/NV C and S series breakers can accept electric operation devices.
- The electric operation device's performance and operation characteristics are unchanged.
- The external dimensions (shown for the main NF/NV models) are unchanged, except for height A in the figure.
